2018 Med-A Formulary

Please read: This document contains information about medications in the PharMerica Med-A Formulary.

**For the most current list of covered medications or if you have questions
Contact your PharMerica Account Manager**

Understanding your formulary

What is a formulary?

A formulary is a list of prescribed medications selected by PharMerica for their safety, cost and effectiveness. Medications are listed by categories or classes and are placed into cost levels known as tiers. It includes both brand and generic prescription medications approved by the U.S. Food and Drug Administration (FDA).

How do I use my formulary?

You and your staff can consult the formulary to help you select the most cost-effective prescription medications. This guide tells you if a medication is generic or brand, and if special rules apply. If your medication is not listed here, you will still have access to the medication. If you have any questions, please contact your Account Manager.

How is this Formulary different than my Per Diem Formulary?

Your Per Diem Formulary designates which medications are included in your daily rate for each resident based upon your contracted plan.

The PharMerica Med-A Formulary is comprised of agents that have a clinical and/or financial benefit in their therapeutic class. Preferred medications should not supersede clinical judgement based on patient specific factors and indications.

What are tiers?

Tiers are the different preference levels for medications on the PharMerica Formulary. Each tier is determined by PharMerica and our affiliates.

When does the formulary change?

- Medications may move to a lower tier at any time.
- Medications may move to a higher tier when a generic equivalent becomes available.
- Medications may move to a higher tier or be excluded from coverage on January 1 or July 1 of each year.

Why are some medications excluded from coverage?

A medication may be removed from this list if it works the same as or similar to another prescription or over-the-counter (OTC) medication.

What is the difference between brand-name and generic medications?

Generic medications contain the same active ingredients (what makes the medication work) as brand-name medications, but they often cost less. Once the patent for a brand-name medication ends, the FDA can approve a generic version with the same active ingredients.

What if the order is for a brand-name medication?

If an order is written for a brand-name medication, PharMerica will automatically substitute for a generic equivalent if available. If a generic is not available, the brand-name medication will be dispensed. Generic medications are usually your lowest-cost option.

What if my patient is on a specialty medication?

Specialty medications treat rare or complex conditions and are typically higher cost medications. Please note, not all specialty medications are listed in the formulary. PharMerica can provide most of your specialty medications along with helpful programs and services. Contact your Account Manager if you have questions related to dispensing specialty medications.

Reading your formulary

The formulary gives you choices so you can determine your best course of treatment for your patients. In this formulary, brand-name medications are shown in UPPERCASE (for example, CLOBEX) and generic medications in lowercase (for example, clobetasol).

Tier information

Using lower tier or preferred medications can help reduce your facility's out-of-pocket costs.

Drug Tier	Includes
Tier 1	\$ Lower-cost generics and some brand-name
Tier 2	\$\$ Mid-range cost preferred brand-name
Tier 3	\$\$\$ Highest-cost non-preferred

Drug list information

In this drug list, some medications are noted with letters next to them to help you see which ones may have coverage requirements or limits.

PMDD Premenstrual Dysphoric Disorder

SP **Specialty Medication** – Medication is designated as specialty.

3P Tier 3 preferred

SGLT2 SGLT2s may not be appropriate in patients with decreased kidney function, or patients who are at a high risk for UTIs, which are common in geriatric patients. Please use caution in prescribing this class of medications.
