

Increase Quality of Care with Emergency and First-Dose Dispensing

RxNow

Immediate, secure access to medications.

Delayed access to time-critical medications can result in suboptimal therapy and prolonged patient recovery – and even readmissions. In fact, skilled nursing facilities average three medication-related readmission per year. To avoid delays and preventable harm, RxNow™ automated dispensing solution ensures immediate access to all-important first-dose and emergency medications.

Improved Patient Care

Rising patient acuity levels is increasing the need for immediate medication availability of dynamic drug regimens upon admission. PharMerica's RxNow is an advanced medication availability system that provides instant, secure access to medications to satisfy emergencies, new admissions, and time-sensitive first-dose situations for improved patient care. Enhanced outcomes can deliver other benefits as well: improved referrals, reputations and profits.

System Safety and Efficiencies

RxNow doesn't just improve the timeliness of medication administration. The cloud-based platform offers a host of features and functionalities to drive staff productivity and the safety of care delivery, including:

- Enhanced efficiency and visibility with a color touchscreen
- Improved medication and controlled substances security through bio ID rapid access
- Reduces the need for STAT and back-up deliveries
- Real-time, business intelligence reporting
- Eliminates the inefficiencies of emergency tackle boxes and kits

Enhanced Regulatory Compliance

Regulatory requirements affecting medication management are increasingly complex and demanding. That's where RxNow can help. A nurse or driver never handles a medication, further reducing the chance for errors. The biometric system helps the facility to manage threats to resident's health and facility management through proper identification.

Seamless Integration with PharMerica

To improve the process of order and inventory management, RxNow features superior workflows that ensure resident information, medication profiles, and billing notifications seamlessly flow between facilities and PharMerica. This improved workflow allows the nursing staff to focus on what is truly important – providing top-quality resident care.

Electronic Exchange Technology

The CUBIE™ Exchange Technology is the most secure method for emergency medication dispensing. The CUBIE replenishment system supports standards, requiring pharmacists to review medication orders before dispensing, providing clinical efficiencies and patient safety.

PharMerica provides innovative solutions to control pharmacy costs, ensure accurate and timely access to medications, and remain in compliance with state and federal regulations.
