Price Forecaster

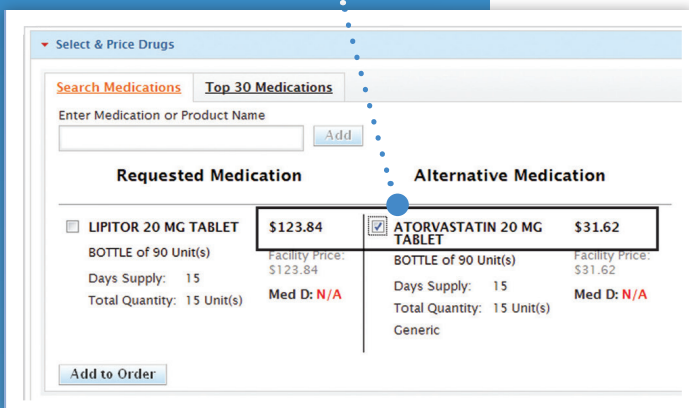

Minimize Cost and Enhance Care

As facilities look to contain rising expenditures, Price Forecaster provides fast, accurate pre-admission medication pricing to aid in admitting decisions and, for accepted incoming residents, minimizes costs while enhancing care.

Significant Value

Price Forecaster is an advanced technology solution that identifies lower-cost alternatives and therapeutic interchange recommendations prior to or upon admission – before a resident’s first dose. Available online or via fax, the system automatically reveals significant opportunities to save through:

- Presentation of lower-cost covered alternatives for both Med A and Med D residents
- Review of coverage under your formulary or a resident’s Part D formulary
- Automatic generation of required documentation for physician approvals
- Best pricing on over-the-counter medications

... And Safety

Our pharmacist consultants support this proprietary tool with clinically appropriate recommendations to ensure effective therapies and medication regimen management for residents. Plus, any cost-saving changes can be ready when incoming residents arrive, reducing therapy interruptions and delays experienced when switching medications at a later time.

With Price Forecaster, you will realize optimal outcomes for residents – and your bottom line.
